Labor Verteilte Systeme

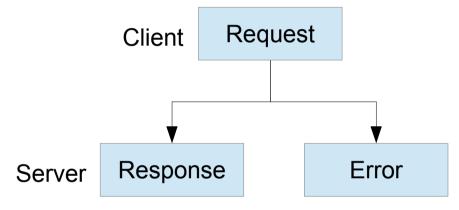

Protokoll Entwurf V2.4 MES Semester 2 25.4.2016

Nachrichten Header V2.4

31	24	23	16	15	8	7	0
Prid	ority	Version			Mode	Function	Туре
Length			Reserved				
Data							

Key features

- Kompatibel zur Status Anfrage
- Einfache Umsetzung

- Für alle Labore einsetzbar
 - Labor 1: Priorität beliebig belegen
 - Labor 1 & 2: Keine Broadcasts unterstützen
- Einfach Aktualisierbar

- Priority: Nachrichten Priorität 0 > 255
- Version : Protokollversion
 PROTOCOL_VERSION = 14
- Sender Type / Mode:

1 : Status Tracker MODE_STATUS

- 2 : Server MODE SERVER

- 3 : Client MODE_CLIENT

• Length: Länge der Paketdaten (ohne Header)

- Function (4 bit):
 - 0 : Set PolynomeFNC_POLYNOME
 - 1 : Decrypt DataFNC_DECRYPT
 - 2 : Unlock serverFNC_UNLOCK
 - 5 : BroadcastFNC_BROADCAST
 - 6 : StatusFNC_STATUS

- Type (4 bit):
 - 3 : RequestMSG REQUEST
 - 4 : ResponseMSG_RESPONSE
 - 15 : ErrorMSG ERROR

Fehlercodes

0 : No Error

NO_ERROR

• 1: Wrong Length

ERR PACKETLENGTH

2 : Invalid Version

ERR INVALIDVERSION

• 3 : Invalid Mode

ERR_INVALIDMODE

4 : Unknown Function

ERR_NOSUCHFUNCTION

• 5 : Invalid Type

ERR INVALIDTYPE

6: Inkonsistenter Paketheader

ERR_HEADER_DATA

• 8 : Data Error

ERR DATA

• 16 : Server already used

ERR_SERVERINUSE

• 32: Function timed out

ERR FUNCTIONTIMEOUT

33 : Funktions Ausführungs Fehler

ERR FUNCTIONEXEC

• 64 : Entschlüsselungs Fehler

ERR_DECRYPT

128 : Allocation Error

ERR ALLOC

254: Kein Paket am Socket

ERR NO PACKET

• 255 : Unknown Error

ERR_UNKNOWN

- Set Polynome : 2 Bytes (signed) Client ID
 16 Bit Polynome
 - Response : Empty
- Decrypt Data: 2 Bytes (signed) Client ID
 16 Bit Block ID
 Data to decrypt (n Bytes)
 - Response : 2 Bytes (signed) Client ID
 2 Byte Block ID
 Decrypted Data (n Bytes)

- Unlock Server: 2 Byte (signed) Client ID
 - Response : Empty

Broadcasts und Statusabfragen

- Broadcast : Empty
 - Response : 4 Bytes Server IP

- Status: Empty
 - Response : 2 Bytes (signed) Client ID
 - 2 Reserved
 - 4 Bytes Sequence Number

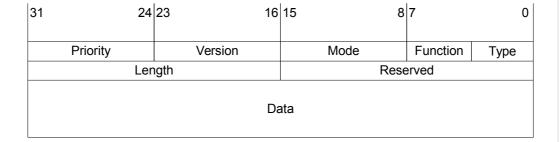

Fehler Nachrichten

- Header wie empfangen
- Data : 1 Byte Error Code
 2 Byte Block ID
- Block ID nur bei ERR_SERVERINUSE & ERR DECRYPT sonst 0
